Message from the Chair

It is an honor and a pleasure to serve as the chair of this historic department. Since joining the University of Wisconsin School of Medicine and Public Health in October 2019, I feel as though *I stand on the shoulders of giants*—those who defined and led anesthesiology, and who have contributed to academic leadership around the country and the world since the early days of anesthesiology.

Founded by Ralph M. Waters in 1927, ours was the first academic anesthesiology department in the United States. Today our mission reflects the same noble vision established by Dr. Waters: Excellence in clinical practice, education and research.

As clinicians, we serve communities in Dane County and beyond through diverse clinical service lines across the UW Health enterprise. As teachers, we educate and train medical students, residents and fellows. As scholars, we advance basic, clinical and translational research. In all these endeavors we cultivate a safe and supportive environment for individuals from all backgrounds to practice, teach, learn and conduct research.

Through this profile, I invite you to get to know us. By highlighting each of our mission commitments, it provides a comprehensive look at the UW School of Medicine and Public Health Department of Anesthesiology.

A handwritten signature in black ink, reading "K. A. McQueen".

K. A. KELLY MCQUEEN, MD, MPH, FASA

Ralph M. Waters Distinguished Chair in Anesthesiology
Chair and Professor, Department of Anesthesiology

Our Department Today

CLINICAL EXCELLENCE

Our anesthesiology practice exemplifies a physician-led, team-based approach to patient care throughout UW Health and involves faculty anesthesiologists, fellows, residents and clinical anesthetists.

UW Health clinical sites include: University Hospital, a 505-bed quaternary care facility; American Family Children's Hospital, a 111-bed pediatric facility and East Madison Hospital, a 56-bed satellite hospital. Ambulatory locations include the Digestive Health Center, East Park Medical Center, Madison Surgery Center, Generations Fertility Care and Transformations Surgery Center.

EXCEPTIONAL EDUCATION

The Department directs a range of robust educational programs. With 64 residents and interns, we house the second-largest UW Health residency program. We offer three accredited and several non-accredited fellowships. Third- and fourth-year medical students rotate with us year-round. We also offer anesthesiologist assistant rotation opportunities, up to 48 each year, and now offer a senior student registered nurse anesthetist rotation program.

CUTTING-EDGE RESEARCH

Our bold researchers and innovators excel at working in collaborative, multidisciplinary teams to improve the wellbeing of people in Wisconsin and around the world.

Three of our faculty members pursue cutting-edge basic science research funded by the National Institutes of Health. Current areas of investigation include: the neural basis of consciousness and its disruption by anesthetics, sleep and delirium; understanding how modulation of GABA receptors impairs learning and memory; and identifying genetic factors that may influence anesthetic-induced neurotoxicity.

In clinical research, our department enjoys national and international recognition for its longstanding interest in testing new methods and techniques for the treatment of both acute and chronic pain. Other department researchers seek to improve care of patients in the intensive care unit and advance liver transplant surgery.

Our commitment to translational research includes a project to develop novel treatments for chronic pain by focusing on the transition from acute to chronic pain, and a collaborative project with the Department of Family Medicine to investigate the antidepressant effects of psilocybin.

Senior Leadership, left to right: Dr. Timothy McCormick, Vice Chair for Clinical Affairs, Dr. Kelly McQueen, Department Chair, Dr. Joshua Sebranek, Senior Vice Chair, Will Katz, Chief Administrative Officer.

Vice Chair Council, left to right: Dr. Zoltan Hevesi, Vice Chair for Quality and Safety, Dr. Joshua Sebranek, Senior Vice Chair, Dr. Kristin Bevil, Vice Chair of Education, Dr. Kristopher Schroeder, Vice Chair of Faculty Development, Dr. Zachary Campbell, Vice Chair for Research. Not pictured, Dr. Timothy McCormick, Vice Chair for Clinical Affairs.

Division Leadership, left to right: (top row) Dr. Micah Long, Division Chief Critical Care Anesthesia, Dr. Katherine Kozarek, Cardiothoracic and Vascular Anesthesia, Dr. Keth Pride, Chronic Pain Management, Dr. Corey Amlong, Neuroanesthesia, (middle row) Dr. Benjamin Walker, Pediatric Anesthesia, Dr. Elizabeth Townsend, Transplant Anesthesia, Dr. Mark Stram, Perioperative Medicine, (bottom row) Dr. Lisa Klesius, Regional Anesthesia and Acute Pain, Dr. Richard Lennertz, Adult Multispecialty Anesthesia.

REMARKABLE STAFF

The department is staffed to support our three missions—clinical services, education and research, and to sustain our cross-cutting foundational commitments—professional development, quality and safety, wellbeing, and social impact and belonging. Additionally, two areas of focus—global health and sustainability, are supported by our administrative team. The department team includes an events coordinator and communications manager, and staff assigned to each faculty division and committee.

The department is also staffed with a robust team to support operations— inclusive of a Chief Administrative Officer and their leadership team overseeing Finance, Research, Education, and Faculty Development. Jointly this high-functioning team is responsible for ensuring operational alignment with the University of Wisconsin School of Medicine and Public Health and UW Health.

Administrative Leadership, left to right: (top row) Charles Williams, IT Manager, Jeremy Sullivan, Associate Department Administrator, (middle row) Kate Gorsuch, Onboarding Manager, Will Katz, Chief Administrative Officer, Aaron Pinkston, GME Administrator, (bottom row) Judy Helt, Finance Associate Director, Marie Hendricks, Executive Assistant, Kellie Bauman, Research Program Manager.

ALL WAYS FORWARD

As UW Health's surgical enterprise continues to expand, the Department's clinical activity will grow with it, particularly in the delivery of ambulatory anesthesia and non-operating room anesthesia (NORA). We are proud to share our comprehensive UW Health Pre-Anesthesia Clinic at East Madison Hospital has opened and is currently serving our surgical patients, virtually and in person.

Our Global Program extends our impact to communities in need. By offering sustainable support for education, training and research in low-income countries we engage our faculty and learners in the challenges of providing safe anesthesia care in resource-constrained regions.

Department of Anesthesiology Administrative Staff Members

Mission, Vision, and Values

MISSION

Consistent with the foundations established by Dr. Waters, today we are committed to remarkable patient care, excellent education and training, and innovative research, in a respectful and compassionate environment.

VISION

Our vision is to lead academic anesthesia into the future with a commitment to respectful leadership, a community dedicated to our mission locally, regionally, and globally. We strive to enhance remarkable care for our patients in the operating room, perioperative and pain clinics and intensive care units, while we ensure well-being within our teams.

VALUES

- **Integrity and Accountability:** Every person, every action, every time.
- **Compassion and Empathy:** Treat ourselves and others with kindness and understanding.
- **Social Impact and Belonging:** Sustain a commitment to health equity, ensuring the preservation of the rights, dignity, and differences of our patients, colleagues and community.
- **Excellence and Innovation:** Strive for the very best today and in the future.
- **Purpose and Wellbeing:** Caring for our patients, our community and ourselves.

Named Funds, Chairs, Fellowships, and Professorships

The Department of Anesthesiology recognizes the contributions of individuals and family members through our named Funds, Chairs, Fellowship, and Professorships, and offers important funding in support of the Research and Education missions.

Ralph M. Waters Fund

Dr. Ralph M. Waters

Established by the members of the University Anesthesiology Associates of Wisconsin–Madison in memory of the first chairman, Dr. Ralph M. Waters. Dr. Waters was a faculty member from 1927–1947 and established the first academic Department of Anesthesiology in the United States. The purpose of this fund is to aid the department in its teaching, research, clinical innovation and public service roles.

CHAIRS:

Bamforth Research Distinguished Chair in Anesthesiology Fund

Dr. Betty Bamforth

Originating from the estate of Dr. Betty Bamforth, the Distinguished Chair fund is intended to recognize a researcher at mid-career, to stimulate and advance research in Anesthesiology and to provide the necessary financial support for research materials, lab supplies, publications, and similar expenses.

O. Sydney Orth, MD, PhD Chair Fund

The O. Sydney Orth; MD; PhD Chair Fund was created at the request of the Department of Anesthesiology to honor Dr. Orth; the Chair of the Department of Anesthesiology

Dr. O. Sydney Orth

from 1952–1964. Dr. Orth was also a preeminent translational researcher in his day and moved to increase the academic content of his medical specialty.

FELLOWSHIP:

John F. Kreul, MD Educational Fellowship Fund

Dr. John F. Kreul

Established at the request of the Department of Anesthesiology in 2006 to honor John F. Kreul, MD for his twenty-nine years of faculty service to the UW Dept. of Anesthesiology, the UW Hospital and Clinics, the University of Wisconsin, the Wisconsin Society of Anesthesiologists, the American Society of Anesthesiologists and his commitment to continuing education and lifelong learning. The fellowship is designed to support professional development for mid-

career faculty members interested in pursuing formal lifelong learning opportunities that will enhance their careers in Anesthesiology and peri-operative medicine.

PROFESSORSHIP:

Anna K. Arndt Fund

Anna K. Arndt

Established by the Arndt Family in honor of their Grandmother. The purpose of the Anna K. Arndt Professorship Fund is to encourage clinical innovation and clinical research within the Department of Anesthesiology. All faculty members in the Department of Anesthesiology who are on the tenure or CHS track are eligible for the Professorship for up to three years in duration.

Pre-Anesthesia Clinic

Dr. Mark Stram, PAC Medical Director, Ashley Bishop, Manager Perioperative Service, and PAC Faculty.

The Department of Anesthesiology opened the comprehensive UW Health Pre-Anesthesia Clinic at East Madison Hospital on October 3, 2023. The clinic expands our reach to better evaluate and prepare patients for surgery. We have continued to grow our patient volume each year to over 4,000 encounters annually, and we are adding additional staff to meet that increasing demand.

The goal of the PAC is improved patient and health system outcomes, along with increased provider, patient and family satisfaction by rotating anesthesiology residents.

PROVIDING PATIENT-CENTRIC CARE

Timely preparation of surgical patients decreases their risk of complications and reduces costs related to longer hospital stays and readmissions. These efforts have also led to a decrease in case delays and case cancellations on the day of surgery.

Our comprehensive pre-anesthesia clinic risk-stratifies patients based on comorbidities and/or surgical risk and allows for both in-person and telehealth patient consults.

We are a team of nurses, advanced practice providers (APPs—nurse practitioners and physician's assistants), and physicians who staff the Pre-Anesthesia Clinic (PAC).

Division of Perioperative Medicine

DIVISION CHIEF: DR. MARK STRAM

PAC Faculty, APPs, and Nurses.

The Division of Perioperative Medicine brings together anesthesiologists with expertise in preoperative evaluation, patient optimization, perioperative risk assessment, and postoperative recovery. Through a collaborative, multidisciplinary approach, division faculty work with surgeons, primary care physicians, advanced practice providers, nurses, and other specialists to improve outcomes for patients undergoing surgical and procedural care.

As surgical care becomes increasingly complex, perioperative medicine plays a critical role in identifying modifiable risk factors, coordinating care across specialties, and ensuring patients are prepared physically and medically for surgery. Division faculty provide leadership for perioperative initiatives throughout UW Health, including Enhanced Recovery After Surgery (ERAS) programs, frailty assessment, perioperative quality improvement efforts, and development of evidence-based clinical pathways.

The division serves as the academic home of the UW Health Pre-Anesthesia Clinic and supports innovations in patient optimization, perioperative outcomes research, and education. Faculty are actively engaged in teaching medical students, residents, fellows, and advanced practice providers, helping prepare the next generation of perioperative physicians.

As UW Health continues to expand its surgical enterprise, the Division of Perioperative Medicine will play an increasingly important role in advancing patient-centered, evidence-based care across the continuum of surgery.

Adult Cardiothoracic and Vascular Anesthesia

DIVISION CHIEF: KATHERINE KOZAREK, MD

Cardiothoracic and Vascular Anesthesia team members under the supervision of Joshua Sebranek, MD prepare a patient for open heart surgery at University Hospital.

All faculty in our division are fellowship-trained in cardiothoracic and vascular anesthesia and provide anesthesia for scheduled and emergency cardiac, thoracic, and vascular surgeries, as well as interventional cardiology procedures.

Cardiac procedures include coronary artery bypass surgery, valve surgery, heart transplants, ventricular assist devices and ascending aortic aneurysms/dissections. Thoracic procedures include lung resections, esophagus surgery, mediastinal masses, lung transplants and extracorporeal membrane oxygenation (ECMO). UW Health is a major center for complex aortic surgery.

In the Cath lab we provide anesthesia for ablations and laser lead extractions, as well as MitraClip, Watchman and Transcatheter Aortic Valve Replacement (TAVR) procedures. Vascular procedures include bypasses, endarterectomies, aneurysms, and dissection.

Our division also provides state-of-the-art anesthesia with intensive monitoring including transesophageal and transthoracic echocardiography. We are well known for our expertise in thoracic aortic aneurysms and transplants.

Each year two fellows complete their training in the accredited cardiothoracic and vascular anesthesia fellowship. Our fellows experience wide-ranging, in-depth clinical experience in cardiac, thoracic, vascular, and thoracic anesthesia in addition to rotations in echocardiography, critical care, pediatric congenital anesthesia, and interventional cardiology procedures. Upon completion, fellows obtain the National Board of Echocardiography Advanced Perioperative Transesophageal Echocardiography Certification.

Resident under the supervision of Eric Simon, MD at University Hospital.

Cardiothoracic and Vascular Anesthesia Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

DIVISION HIGHLIGHT

Dr. Eric Simon, along with colleague Dr. Patrick Meyer, is conducting a clinical research trial investigating the use of bilateral pecto-intercostal fascial plane blocks with liposomal bupivacaine for analgesia following median sternotomy in elective cardiac surgery patients. Validation of the safety and efficacy of the pecto-intercostal fascial plane block will have major implications for enhanced recovery after cardiac surgery, potentially leading to improved patient outcomes and decreased health care costs.

Chronic Pain and Pain Management Treatment

DIVISION CHIEF: KETH PRIDE, MD

Alaa Abd-Elseyed, MD, MPH, performs a surgical procedure to address a patient's chronic back pain at University Hospital.

The Division of Chronic Pain Management Treatment is part of a larger multidisciplinary pain management program at UW Health.

In addition to treating all chronic pain conditions using the most advanced modalities and technologies, we also provide a second-opinion service, eConsults and telemedicine services. Members of our division have participated in many research endeavors including U.S. Food and Drug Administration trials. We also co-direct an accredited chronic pain fellowship in collaboration with the UW School of Medicine and Public Health Department of Orthopedics and Rehabilitation.

Members of the division pursue state-of-the-art clinical strategies to reduce chronic pain and manage general pain treatment with an emphasis on treating the whole patient and carefully considering the pathology of their pain. The team is able to dramatically improve quality of life with advanced technologies and modalities that successfully reduce or block pain.

Dr. Abd-Elseyed's clinical trial titled NOVA examines the efficacy of new spinal cord stimulation waveforms on improvement of low back pain in patients with severe pain resistant to all other modalities.

The division also participates in national research studies including neuromodulation Product Surveillance Registry (PSR) funded by Medtronic and the COMFORT study, a clinical study of a micro-implantable pulse generator for the treatment of peripheral neuropathic pain sponsored by Nalu. New clinical trials are being assessed that examine the treatment of chronic pain and peripheral nerve stimulators for treating different neuralgias.

Chronic Pain and Pain Management Treatment Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

DIVISION HIGHLIGHT

Dr. Keth Pride serves as the associate director for the chronic pain fellowship program, section head of neuromodulation and the director for the anesthesia resident pain rotation. With a particular interest in peripheral nerve stimulation, he contributes to many ongoing research studies, including one which seeks to evaluate the efficacy of lumbar radio frequency ablation. An active instructor in the UW School of Medicine and Public Health, Dr. Pride teaches medical students as a Partner Longitudinal Teacher Coach.

Critical Care Anesthesia

DIVISION CHIEF: MICAH T. LONG, MD, FCCM

CTICU Rounds

We provide world-class care to heart, lung, heart/kidney, heart/liver, and heart/lung transplant recipients in the cardiothoracic ICU, and to our liver and other organ transplant recipients in the surgical ICU. We've had incredible growth in our transplant programs and in our mechanical circulatory support program, where we expertly manage complex patients supported with ECMO, VADs and total artificial hearts.

Our faculty take a "clinician-first" mindset in our academic careers, and we are respected throughout the hospital as experts in the management of unstable patients. We are key parts of UW Health's ECMO and Shock Consult Teams, where our faculty participate in the decision-making surrounding the management of acutely decompensating patients with severe end-organ failure. Additionally, several of our faculty participate in ECMO cannulation.

Faculty in the Division of Critical Care Anesthesia provide critical care to patients in the cardiothoracic ICU—our home unit, the surgical/trauma ICU, and the medical ICU. The UW School of Medicine and Public Health and UW Health is home to one of the nation's leading organ transplant programs.

The critical care faculty are also excellent medical educators, and several have been awarded prestigious teaching awards. Our ACGME-accredited fellowship allows for three fellows annually, offers dual-training in cardiac and critical care for select applicants, and is accredited to train emergency medicine residency graduates via the ABA / ABEM two-year pathway.

Our division has had excellent success in our academic endeavors including research endeavors sponsored by department and system grants as well as industry. We have active research projects in cardiac arrest management, invasive and non-invasive continuous hemodynamic monitoring, diabetes/dysglycemia, intubation and simulation, and more. Our faculty serve as site leads for major clinical trials and several are involved in governing body leadership within the SCCM, SOCCA, ASA and more.

DIVISION HIGHLIGHT

Our faculty have local, national, and international recognition and involvement. All present locally and regionally, and several are sought-after national and international speakers.

Dr. Arrigo designed, programmed, and published "ECHO On," a free, open access medical education app. Currently he is working on the Stanford Anesthesia Cognitive Aid Program and an interactive hemodynamics simulator and trainer.

Dr. Demiralp massively grew and improved our cardiothoracic ICU. This high-volume unit is now the only closed ICU with 24/7 in-house intensive care faculty presence at UW Health. She has key leadership roles at SCCM and SOCCA, including committee chair work.

Dr. Feichtinger is a sought-after lecturer and instructor in POCUS and simulation-based education.

Dr. Frackman has presented and published in medical education, focused on cognitive aids and in high-fidelity and augmented-reality medical simulation.

Dr. Hammel is nationally and internationally recognized for her work in liver transplantation and played a significant role in expanding and guiding the preoperative workup and medical management of transplant recipients.

Dr. Tawil is highly involved in the ASA's critical care & cardiothoracic committees and is a section editor for the Anesthesia Toolbox. He has published broadly in cardiothoracic anesthesiology.

Dr. Long, is the Division Chief and site lead for multiple major multicenter research studies, including the PCCRG and SCCM's Discover IHCA and is an expert on nonhepatic hyperammonemia and diabetes/dysglycemia and glucose measurement in the ICU and OR. He has won many prestigious educational awards and is involved in SCCM and hospital leadership.

Critical Care Anesthesia Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

Adult Multispecialty Anesthesia

DIVISION CHIEF: RICHARD LENNERTZ, MD, PHD

Richard Lennertz, MD, PhD and Clinical Anesthetist prepare a patient for an outpatient procedure at University Hospital.

The Division of Adult Multispecialty Anesthesia delivers outstanding evidence-based care, fosters innovation, and encourages individuals to pursue clinical and research interests.

We provide anesthesia care across a wide range of surgical specialties including ear, nose, and throat (ENT), plastic surgery, orthopedic surgery, general surgery, neurosurgery, and vascular surgery. We also provide anesthesia services for several non-OR procedures including those in interventional radiology, brachytherapy, and gastroenterology.

Our wide-ranging research interests include both lab-based basic science research and clinical research. The diverse areas of interest to which our faculty have contributed include developing ERAS protocols for various services; innovative use of jet ventilation for solid organ ablations; and groundbreaking work on the use of convalescent plasma and vaccines during the COVID-19 pandemic.

Our faculty's research projects have included investigating mechanisms of anesthetic action in animal models, understanding the pathophysiology of postoperative delirium, and conducting a multidisciplinary study of the antidepressant effects of psilocybin. Ongoing quality improvement efforts include reducing the environmental footprint associated with the delivery of anesthesia and patient optimization prior to elective surgery. Additionally, we help residents and medical students produce research to present at regional and national meetings and publish in a wide variety of journals.

Adult Multispecialty Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

NON-OR ANESTHESIA (NORA)

Non-OR anesthesia (NORA) cases make up approximately 20 percent of total anesthesia cases at UW Health, or more than 8,000 cases per year. These cases include cardiac, radiologic imaging, CT ablation, interventional radiologic, neuroendovascular, brachytherapy and gastroenterology procedures. Overall, NORA volumes have increased approximately 10 percent annually for nearly 10 years and we anticipate this continuing in the future.

DIVISION HIGHLIGHT

Dr. James Gentry is a highly respected anesthesiologist and serves as the Assistant Program Director for the residency. He developed and directs the Gaining Anesthesia Skills Together In Modern Education (GASTIME) program to share his passion with incoming residents. GASTIME introduces residents to members of the department and provides specialty-specific learning during their intern year. In addition to his educational leadership, Dr. Gentry oversees the delivery of non-operating room anesthesia at the Digestive Health Center for thousands of patients each year, promoting the delivery of safe and effective care.

Preparing a patient for surgery at EMH.

AMBULATORY ANESTHESIA

Ambulatory anesthesia proudly provides comprehensive and compassionate care to an increasing number of patients in a variety of procedure and ambulatory surgery centers. We are able to effectively care for a wide spectrum of patients by adopting innovative approaches and the latest evidence-based anesthesia modalities. At East Madison Hospital and the Madison Surgery Center, for example, we employ a host of general, regional and Monitored Anesthesia Care (MAC) anesthesia techniques for the variety of general, ophthalmology, orthopedic, otolaryngology, plastics, and vascular surgeries. At Generations Fertility Center and the Digestive Health Center, we provide sedation services. We also provide coverage for UW Hospital Outpatient Surgery Center (OSC), where patients with more serious comorbidities are cared for on an outpatient basis.

Complementing our steadfast clinical mission, our division also offers a variety of educational opportunities. We train future professionals to advance the practice of anesthesia; education is integral to our division. We teach a variety of learners about our specialty and demonstrate how our work integrates with the world of medicine. Additionally, we train residents at most of UW Health's clinical locations and expand our reach to alternative settings by providing educational opportunities in simulation for medical students, residents, and other learners.

Beginning in their CA-1 year, residents are required to spend a four-week rotation in OSC. There they are introduced to the challenges and nuances of ambulatory anesthesia. We also offer a senior ambulatory anesthesia elective for CA-3 residents who wish to operate in a more independent fashion.

Our division houses a unique ambulatory anesthesia and administrative medicine fellowship that offers insight into the business, financial and administrative aspects of an anesthesiology practice.

Neuroanesthesia

DIVISION CHIEF: COREY AMLONG, MD

Whitney Fallahian, MD leads a resident physician in preparation for brain surgery.

Annually the Division of Neuroanesthesia helps usher patients through over a thousand neurosurgical cases, including spinal fusions and decompressions, resection of spine and brain tumors, open and endovascular correction of spinal or intracranial vascular malformations and aneurysms, cerebrospinal fluid shunts, and surgical interventions for movement disorders and epilepsy. As a level 1 stroke center we take care of approximately 150 patients presenting for endovascular intervention for embolic stroke every year. It is anticipated that these numbers will continue to increase as our stroke program expands.

Endovascular cases are now done in two recently-completed, state of the art, hybrid endovascular operating rooms. These rooms give us the ability to safely perform open/endovascular combo cases in the same location, thus limiting unnecessary patient transports between the operating room and the IR suites.

At UW, internationally recognized neurosurgeons perform a myriad of surgical services, both open and endovascular. The UW Department of Anesthesia's Division of Neuroanesthesia is there for each of these patients.

The Division of Neuroanesthesia takes pride in providing remarkable perioperative care for all patients while staying on the cutting edge in terms of constant advancements in neurosurgical techniques, therapeutics, and neuro-monitoring. We also endeavor to remain active in both clinical and bench neuroscience research while maintaining an atmosphere that is welcoming and nurturing to resident and medical student learners.

We offer a Neuroanesthesia Fellowship for interested individuals eager to hone their knowledge and skills. This is a non-ACGME accredited fellowship that is structured based on an individual's specific interests and provides ample time to allow for educational or research pursuits. Fellows have the ability to choose electives that are interesting to them, from extra time reading intraoperative neuromonitoring to added time focusing on post-op ICU care.

Neuroanesthesia Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

DIVISION HIGHLIGHT

Dr. Fallahian is an integral and core member of the Division of Neuroanesthesia. She is a nationally recognized educator who serves as Fellowship Director for the department's Neuroanesthesia Fellowship and manages curriculum for resident rotations in neuroanesthesia. She is currently conducting a research study investigating both short- and long-term outcomes in patients who have received general vs monitored anesthesia during stroke thrombectomies.

Pediatric Anesthesia

DIVISION CHIEF: BENJAMIN WALKER, MD

Faculty physician and resident caring for patients at American Family Children's Hospital.

The Division of Pediatric Anesthesia provides comprehensive anesthesia care for the diverse pediatric patients treated at the nationally recognized American Family Children's Hospital.

All of our anesthesiologists are dedicated to providing safe, quality care for our patients, and we have a robust quality improvement program that strives to improve the management of anesthetic care for all children.

Our patients range from healthy toddlers and teens to critically ill premature infants and children staying in our neonatal and pediatric intensive care units. We work closely with our pediatric surgical and procedural colleagues from many pediatric specialties including cardiac surgery, general surgery, neurosurgery, otolaryngology, orthopedics, urology, plastic surgery, ophthalmology, transplant surgery, interventional cardiology, and interventional radiology.

To meet our patients' varied needs our division also includes subspecialty-trained pediatric anesthesiologists in pediatric cardiac anesthesia and complex pediatric pain management.

Our growing comprehensive pediatric pain program provides perioperative consultative services in advanced pain management for our surgical and pediatric colleagues. We also treat patients with both acute and chronic pain on our inpatient consult service. In addition to providing excellent clinical care, our pediatric anesthesiologists extend our impact through teaching fellows, residents and medical students, and by participating in global health endeavors.

Nationally, the pediatric anesthesia division is involved with several national databases and collaborative projects. Locally, we conduct a number of clinical studies. Our division also houses novel research and designs development projects aimed to improve monitoring and safety for patients globally.

Eva Lu-Boettcher, MD and resident caring for a patient at American Family Children's Hospital.

Pediatric Anesthesia Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

DIVISION HIGHLIGHT

Dr. Ben Walker focuses on pediatric acute pain and regional anesthesia, including advanced epidural and perineural catheter placements. He has performed extensive research on the safety and efficacy of performing regional anesthesia techniques in children and has taught these techniques at a national level. At American Family Children's Hospital the pediatric acute pain team focuses on designing multimodal pain management plans that minimize opioid exposure to children.

Regional Anesthesia and Acute Pain

DIVISION CHIEF: LISA KLESIUS, MD

Kristopher Schroeder, MD and resident physician preparing a patient for surgery at East Madison Hospital.

The Division of Regional Anesthesia and Acute Pain Management draws upon the abundant resources and surgical case diversity afforded by a world-class health care institution.

Our division provides exemplary pain management to orthopedic, breast, cardiac, thoracic, vascular, general surgery and transplant surgical procedures. We also extend our expertise throughout the hospital to provide care to patients suffering with chronic pain/exacerbations, cancer pain and acute pain following traumatic injuries.

In addition to providing excellent clinical care, the Division of Regional Anesthesia and Acute Pain Management is active at the regional and national level. Members of our team hold multiple leadership positions within the Wisconsin Society of Anesthesiologists, the American Society of Regional Anesthesia and the American Society of Anesthesiologists. Our members are also active academically. We perform significant clinical research and disseminate information and technical expertise through lectures and workshops.

Residents consistently rate the regional anesthesia and acute pain medicine rotation as one of the most popular. We offer residents intensive hands-on training, didactics, and simulation experiences. Medical students and other learners also benefit from instruction at the hands of acute pain medicine specialists and leave better equipped to manage patients with an array of complicated pain management problems.

Finally, our fellowship program has produced alumni who have excelled in private practice and academic settings. The Division of Regional Anesthesia and Acute Pain Management is a team comprised of health care providers from diverse backgrounds. Our physician anesthesiologists, nurse practitioners, physician assistants, block nurses and nursing assistants make valuable contributions to our ability to serve our patients.

DIVISION HIGHLIGHT

In addition to being an outstanding clinician, Dr. Kristin Bevil is dedicated to providing superior education to our residents, medical students, anesthesiologists, and faculty in her role as the Associate Vice Chair for Education. She continues to support the residency program as an Assistant Program Director and is regarded as a top educator in the department. At the 2023 Society for Education in Anesthesia annual meeting, Dr. Bevil was awarded the Philip Liu Award for innovation in curriculum!

Regional Anesthesia and Acute Pain Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

Transplant Anesthesia

DIVISION CHIEF: ELIZABETH TOWNSEND, MD, PHD

Each year the Division of Transplant Anesthesia assists more than 100 liver transplants and hundreds of other abdominal organ transplants, including kidney and pancreas transplantation.

Laura Hammel, MD and Elizabeth Townsend, MD during transplant surgery.

We provide the anesthetic and perioperative care for abdominal organ transplant recipients and organ donors and exclusively anesthetic care for liver transplant recipients and donors. Our core group of board-certified anesthesiologists possesses the diverse and multidisciplinary training and experience needed to understand the complex physiology of end-stage organ failure, liver disease and the intricacies of the liver transplant and abdominal transplant surgery.

In addition to fellowship training in transplant anesthesiology, many members of the division are also formally trained and board-certified in additional anesthesia subspecialties and other medical specialties such as cardiovascular anesthesia, critical care anesthesia, internal medicine and transfusion medicine.

Our tradition of close collaboration with the transplant surgeons and other members of the transplant department has become the model for liver transplant centers for the American Society of Anesthesiologists and the United Network of Organ Sharing. Working closely with the Department of Surgery, division co-leaders take an active role in the selection and preoperative evaluation of transplant recipients, particularly liver recipients. We frequently collaborate with transplant surgeons and other specialists—such as cardiology, pulmonary or other disciplines—to plan multidisciplinary care and create guidelines for the pre- and post-operative care of particularly complex patients.

We ensure all anesthesia residents are instructed not only on the intra-operative anesthetic management, but also receive education on end-stage organ failure and physiology, the process of organ resource allocation and the evaluation of potential transplant candidates.

DIVISION HIGHLIGHT

Dr. Michael Hannaman, Transplant Anesthesia Fellowship Director, partnered with educational and administrative leaders to design a second, alternative fellowship pathway in response to the national shortage of anesthesiologists. This innovative initiative offers greater flexibility and appeal for potential fellows, and has sparked new interest from resident trainees at the local and national levels.

Transplant Anesthesia Division

Visit the "Who We Are" online directory for a complete list of current division faculty: www.anesthesia.wisc.edu

Education Programs

Dr. Kristin Bevil, Vice Chair of Education and Robert Shaw, Associate Vice Chair of Education.

The Department of Anesthesiology's commitment to education is robust and is consistent with the UWSMPH mission-centric expectations for the education of medical students, as well as the UW Health and department goals for Graduate Medical Education. The scope of the department's education programs is inclusive of a required medical student rotation during the MD ForWard Curriculum Phase 2 block "Surgical and Procedural Skills," medical student elective rotations in anesthesiology, critical care, and pain medicine, anesthesiology residency education, subspecialized anesthesia fellowship training, and clinical rotations for CAA and CRNA students. In addition, we support the UWSMPH pre-health advising program.

The education programs of the Department of Anesthesiology are supported by faculty leaders, Dr. Kristin Bevil, Vice Chair of Education and Robert Shaw, Associate Vice Chair of Education, and by program faculty and administrative staff leaders specific to the anesthesiology residency, fellowships, and student programs.

Education Administration Team, left to right: Aaron Pinkston, GME Program Administrator, Brandon Russell, GME Program Manager, Ariana Mislivecek, Academic Program Manager.

Visit the "Who We Are" online directory for a complete list of current division faculty:
www.anesthesia.wisc.edu

The DoA Anesthesiology Residency Program is led by Dr. Eric Simon, Program Director, Dr. Anna Frackman, Associate Program Director, Dr. Patrick Meyer, Associate Program Director, and Dr. Sabrina Sam, Associate Program Director.

The DoA Fellowships are led by faculty program directors with specialized training specific to each fellowship. Dr. Jeffrey Olech, Fellowship Director Adult Cardiothoracic and Vascular Anesthesiology, Dr. Justin Tawil, Critical Care Anesthesiology (not pictured), Dr. Whitney Fallahian, Neurosurgical Anesthesiology, Dr. Nalini Sehgal (not pictured) and Dr. Keth Pride, Pain Medicine (not pictured), Dr. Emily Hesselink, Pediatric Anesthesiology, Dr. Jeffrey Grzybowki (not pictured) and Dr. Elizabeth Scholzen, Regional and Acute Pain Management (not pictured), Dr. Michael Hannaman, Transplant Anesthesiology (not pictured).

RESIDENCY PROGRAM

We take pride in being the first academic department of anesthesiology, founded in 1927 by Dr. Ralph Waters. Our state's motto is Forward, and, in that spirit, we continue to provide our residents with an environment that promotes outstanding patient care, prioritizes education, supports collegiality, and advances the scientific foundation of our discipline. We have designed our residency program to train superior anesthesiologists, ready to practice confidently and competently in any setting and prepared to serve as leaders in their practice group and specialty.

Our residency program is ACGME-approved for 16 categorical positions per class. Typically, we offer categorical, advanced, and reserve (physician only) positions each year through the National Resident Matching Program (NRMP) Main Residency Match.

FELLOWSHIP PROGRAMS

We offer one-year ACGME-accredited fellowships led by top-notch faculty in Adult Cardiothoracic, Critical Care and Pediatric Anesthesiology. We also support the accredited pain management fellowship housed in the Department of Orthopedics and Rehabilitation. Each program accepts up to two fellows per year. Our non-accredited fellowships include Ambulatory and Administrative Medicine, Global Health, Neurosurgical Anesthesiology, Regional and Acute Pain Management, Research, and Transplant Anesthesiology.

ACGME-accredited fellowships

- Adult Cardiothoracic Anesthesiology: 2 positions. (offers dual fellowship with CCM)
- Critical Care Anesthesiology: 2 positions (offers dual fellowship with ACTA and EM two-year pathway)
- Pediatric Anesthesiology: 2 positions.
- Pain Medicine (in collaboration with the Department of Orthopedics and Rehabilitation): 2 positions.

Non-accredited fellowships

- Ambulatory and Administrative Medicine: 1 position.
- Neurosurgical Anesthesiology: 1 position.
- Regional & Acute Pain Management: up to 4 positions.
- Research: 1 position.

Clinical Anesthetist and Medical Student Education

The DoA Medical Student education is led by Dr. Robert Shaw, Associate Vice Chair of Education, and supported by co-directors Dr. Diane Head and Dr. Annie Stumpf, who support the SMPH Anesthesiology Interest Group (AIG).

We believe all future physicians should learn fundamental principles of anesthesiology, which is why we provide a basic, required clerkship for all medical students. Each year 150 students rotate in operating rooms throughout Wisconsin. They also participate in simulations focused on recognizing hemodynamic or respiratory instability and making initial decisions and interventions to stabilize a patient. We also offer elective rotations to our medical students and students from other institutions. Additional elective rotations are available in critical care ("The Shock Course"), pain management and research.

Clinical anesthetists are a critical part of the patient care team at UW Health. Each year up to 48 anesthesia assistant students from around the country rotate with our department. We also have a partnership with the Medical College of Wisconsin for two students per class which allows them to do their entire clinical training at the UW. Additional rotational opportunities for up to three students are also available each month.

We offer a new program providing a rotation to senior-student registered nurse anesthetists (SRNAs) to expand their anesthesia experiences with a variety of cases and help encourage autonomy. The program's inaugural SRNA students hailed from the Mayo Clinic Health System–Franciscan Healthcare.

Other educational opportunities include simulation activities and continuing education for clinical anesthetists. The current design of our simulation program focuses on skill development, including central line placement, ultrasound-guided IVs and arterial lines, regional anesthesia, and scenario-based cases.

Medical Student Training at the UW Health Simulation Center.

Research

BROAD ENGAGEMENT

Department of Anesthesiology faculty on all academic tracks, residents and fellows take part in our basic, translational, and clinical research programs. We are committed to developing the next generation of exceptional anesthesia researchers and leaders, and offer projects for learners in basic, clinical and outcomes research.

The Department of Anesthesiology receives external grant funding from federal agencies, foundations, industry and collaborating universities and currently ranks in the top 30 Anesthesiology Departments in the nation in research expenditures. This work is made possible by an exceptional team of research administrative staff that facilitate all aspects of research inclusive of protocol/proposal generation, regulatory compliance, post award management, statistical approaches, informatics, and navigating industry sponsorship.

Our vibrant research is showcased at annual research nights where all members of the Department are encouraged to share their latest work and to connect with new collaborators. The Department benefits from visiting professorships from high profile researchers who present their findings at grand rounds.

A new initiative called the SPARK Project (Swift Projects in Anesthesia Research & Knowledge) was launched to encourage participation in short term research projects. The initiative brings together small teams of faculty and learners for a one-month project to explore a topic of shared interest and produce a minireview on the topic. This provides a springboard to generate new collaborative projects.

The department is focused on the growth of the tenure track through recruitment of successful researchers. Dr. Sarah Loerch recently joined

*Dr. Zachary Campbell, PhD,
Vice Chair for Research*

the Department from UC-Santa Cruz and brings unique expertise in molecular and biophysical underpinnings of pain signaling.

IMPACTFUL FOUNDATION AND CLINICAL RESEARCH PROGRAMS

Our basic research endeavors in pain, consciousness, memory, neuromodulation, respiratory compromise, and anesthetic neurotoxicity are supported by the National Institutes of Health, private endowments, and other external sources. Current projects focus on understanding the transition from acute to chronic pain, elucidating the mechanisms for unconsciousness, understanding the nature of consciousness and factors contributing to cognitive dysfunction such as delirium, understanding how general anesthetics alter central nervous system function and identifying genetic determinants of anesthetic neurotoxicity.

The department's robust clinical research portfolio includes a variety of industry-sponsored clinical trials and investigator-initiated studies that span a spectrum from perioperative care to chronic pain to investigational drugs and devices. Our clinical researchers seek clinical strategies to reduce pain, evaluate techniques and therapies, improve patients' recovery, and optimize outcomes.

Exploring Mechanisms of Consciousness

LABORATORY OF DR. MATTHEW BANKS

RESEARCH SUMMARY

Research in my lab centers on how changes in brain activity and connectivity result in changes in consciousness. We study this question in human subjects using behavioral assays as well as imaging and electrophysiological measurements focused primarily in neocortex and thalamus. Our areas of interest include mechanisms of loss and recovery of **consciousness under anesthesia**, the overlap of these mechanisms with changes in arousal during **natural sleep**, the link between inflammation and brain function during post-operative and post-ictal **delirium**, and the mechanisms whereby psychedelics ameliorate **psychiatric disorders** (depression, anxiety, substance use disorder).

This research has broad implications for understanding the neural basis of consciousness and the relationship between cortical network activity and cognition and perception. It also is foundational for developing treatments for acute and chronic disorders of consciousness and psychiatric disorders.

The Ongoing Quest for Non-Opioid Analgesics

LABORATORY OF DR. ZACHARY CAMPBELL

Murine dorsal root ganglia stained for DNA (cyan) and two proteins of interest in yellow and magenta.

Dr. Zachary Campbell, PhD

Pain is pervasive and devastating. Poorly treated chronic pain is the largest source of disability in America with an estimated economic cost in excess of 500 billion dollars per year. Moreover, existing strategies to disrupt pain (e.g. opiates) have well-known and highly undesirable effects on reward circuits in the CNS. Better strategies for preventing chronic pain are desperately needed.

In the vast majority of cases, pain originates in the periphery in a specialized type of sensory neuron called a nociceptor. Long-lived changes in their excitability hinge on changes in gene expression. We focus specifically on the process of protein synthesis. Multiple groups have shown that peripheral blockade of this process diminishes pain-associated behaviors in animal models. This suggests that a better understanding of protein synthesis could reveal new ways to prevent or reverse maladaptive plasticity that drives persistent pain. But what are the mRNAs that need to be locally translated and what governs the specificity of protein synthesis in nociceptors? My lab is actively

pursuing these critical questions with generous support from the National Institutes of Health. We make extensive use of functional genomics, pharmacology, physiology, and genome editing. To learn more about our work please visit our website: www.RNAcentral.com

Preventing Postoperative Delirium

LABORATORY OF DR. RICHARD LENNERTZ

RESEARCH SUMMARY

Delirium affects many elderly patients who undergo surgery and has been associated with worse outcomes such as longer hospital stays and dementia. As the population ages, maintaining cognitive function is important to patients and their families. Our research focuses on understanding what causes postoperative delirium and developing strategies to improve perioperative care. We collect cognitive assessments, blood samples, electroencephalogram recordings, and images of the brain from patients to assess the body's response to surgery and changes in the brain. We expect that insights from delirium research will also advance our understanding of Alzheimer's disease and related dementias.

The lab also engages in perioperative outcomes research, using clinical data to determine and implement best practices.

Visualizing Protein Synthesis in Pain and Neurological Disease

LABORATORY OF DR. SARAH LOERCH

Chronic pain and many neurological disorders arise from long-lasting changes in how neurons function. These changes require tightly regulated protein synthesis, yet we still know remarkably little about how this process is controlled at the molecular level. The Loerch Lab investigates how ribosomes, the molecular machines that build proteins, are regulated during neuronal signaling, plasticity, and disease.

Our research combines cryo-electron microscopy (cryo-EM), in situ structural biology, biochemistry, cell biology, and computational approaches to visualize protein synthesis directly inside cells at near-atomic resolution. Rather than studying isolated molecules, we capture ribosomes in their native cellular environment, allowing us to observe how translation is regulated in healthy neurons and how these mechanisms become disrupted in disorders such as chronic pain, autism spectrum disorders, and neurodegenerative disease.

A major focus of our work is understanding how neurons locally regulate protein synthesis within axons and dendrites, enabling rapid responses to synaptic activity and injury. We investigate how signaling pathways reshape ribosome function, how distinct ribosome functional states influence translation, and how these mechanisms contribute to neuronal plasticity. In parallel, we develop new structural and computational methods that enable large-scale analysis of ribosome functional states across cells, tissues, and organisms.

By integrating technology development with fundamental biological discovery, our goal is to uncover the molecular principles that govern protein synthesis in the nervous system and identify new opportunities for therapeutic intervention in neurological disease.

Elucidating the Mechanisms of Memory Suppression and Unconsciousness During General Anesthesia

LABORATORY OF DR. ROBERT PEARCE

Figures: A. Measurement of fluorescent activity in dorsal hippocampal CA1 neurons in vivo. B. Location-specific firing rate of a place cell. From: Zhu et al., PNAS Nexus, 2023.

Research in the Pearce Laboratory focuses on inhibitory GABAergic circuitry in the hippocampus and neocortex. We seek to understand how the general anesthetics that target GABA receptors control memory formation and consciousness.

Memory suppression and unconsciousness are the two most fundamental components of general anesthesia. Using a variety of methods, including electrophysiology, optogenetics, calcium imaging in vivo, and behavioral measures of learning and memory, we are investigating how inhibitory circuits in the hippocampus and neocortex support and control neural network activity—and how their modulation contributes to general anesthesia.

We are particularly interested in determining how anesthetic modulation of the slow GABA-A receptor-mediated inhibition produced by neurogliaform interneurons regulates synaptic plasticity and memory, using brain slice electrophysiological recordings and “place cells” in the hippocampus as a surrogate for contextual memory formation. In addition to improving our understanding of how general anesthetics produce their essential effects, this work will also help explain the neural basis of memory and how it is impaired by disease.

Novel Therapeutics for the Treatment of Asthma

LABORATORY OF DR. ELIZABETH TOWNSEND

Dr. Elizabeth Townsend, MD, PhD

Research in the Townsend Laboratory focuses on mechanisms of ongoing inflammation and inflammation resolution of the airways following an asthma exacerbation. Viral infections are the number one cause of adult asthma exacerbations and lead to increased asthma symptoms, inflammation, and airway remodeling. Some individuals have permanent loss of lung function following an exacerbation, however there are few therapies to aid in recovery from an acute exacerbation aside from prednisone.

The immune system responds to viral infection by generating pro-inflammatory molecules, but also promotes inflammation resolution, in part, through the production of specialized pro-resolving mediators including oxylipins. We are interested in characterizing the different eicosanoids produced in asthmatic

airway epithelium after infection with human rhinovirus, investigating gene regulation and epithelial remodeling as a result of viral infection, and determining the effects of the exogenous administration of pro-resolving oxylipins on the airway following a viral infection. To date, no current therapy utilizes specialized pro-resolving mediators for the treatment of asthma.

Additionally, Dr. Townsend is interested in the systemic inflammatory effects of asthma on other organ systems. Individuals with asthma are known to develop premature cardiovascular disease and obesity and insulin resistance impact asthma severity. The lung and the liver have a common embryonic origin, however, little is known about how asthma impacts the development of non-alcoholic fatty liver disease and metabolic dysfunction-associated fatty liver disease (NAFLD and MAFLD).

We are working to prospectively characterize the incidence of liver fat infiltration in individuals with

asthma, assess how this changes longitudinally, and how asthma exacerbations impact liver fat deposition. We are also developing a biomarker panel to characterize individuals with asthma who are at risk for developing fatty liver disease. Therapies that target inflammation resolution in the airway, may be beneficial at halting or reversing inflammation and remodeling in the liver.

Clinical Anesthetists

CLINICAL ANESTHETIST MANAGER: BROOKE SCHLIEWE

Clinical anesthetists are integral to the Department of Anesthesiology and valued members of our anesthesia care team, comprised of faculty anesthesiologists, certified anesthesiologist assistants and certified registered nurse anesthetists. Clinical anesthetists care for patients in multiple clinical subspecialties including orthopedics, otolaryngology, vascular, pediatrics, urology, neurosurgery, plastics, peripheral vascular, thoracic, trauma, transplant, and cardiac. They also work across multiple UW Health facilities including University Hospital, East Madison Hospital, Eastpark Medical Center, American Family Children's Hospital, Digestive Health Center and Madison Surgery Center.

Our group of clinical anesthetists is still growing to meet UW Health's expanding patient care needs. Clinical anesthetists enjoy competitive salary, comprehensive benefits, excellent clinical case variety, a wide range of educational opportunities and flexible scheduling.

Wellbeing

Members of the Wellbeing Committee

The Department is committed to promoting the health and wellbeing of all of its members by promoting an optimal work-life balance. The department wellbeing committee is led by doctors Diane Head, MD, and Sabrina Sam, MD, and William Filbey, CAA. The committee helped create the Peer Support Program, working in conjunction with UW Health, to provide a confidential, legally protected connection to a clinical peer for support after experiencing difficult or stressful work events. Additionally, the committee organizes a plethora of fun activities for our department members, their friends, and families to foster our team-oriented culture both within and beyond the workplace.

Social Impact and Belonging

Dr. Joshua Sebranek, MD, Social Impact and Belonging Committee Chair and members of the Social Impact and Belonging Committee.

The University of Wisconsin School of Medicine and Public Health (UWSMPH) Department of Anesthesiology's Social Impact and Belonging Committee is dedicated to fostering a culture of belonging for everyone, advancing health equity, and promoting social responsibility within our clinical and academic community. This committee's name reflects our broader efforts by both UW Health and UWSMPH to prioritize not only individual belonging but also collective social impact and changes to health outcomes for all.

Our committee is composed of a broad cross-section of department members, including faculty physicians, clinical anesthesiologists (AAs and CRNAs), residents, fellows, and administrative staff. Importantly, every Vice Chair and Division Chief serves on the committee, ensuring that social impact and belonging remain embedded in departmental leadership and strategic decision-making.

Through targeted workgroups, our committee is actively redefining its charter and reviewing evidence-based strategies proven to enhance social impact and belonging. We remain committed to delivering relevant educational programming and creating lasting change that reflects our core values.

The Social Impact and Belonging Committee plays a vital role in transforming organizational culture by identifying process and policy improvements, promoting accountability, and helping us live up to our mission of serving all communities. In academic medicine, our committee also contributes to recruitment, retention, and well-being by creating environments where all individuals feel seen, supported, and valued.

Sustainability Initiatives

A HEALTHY PLANET LEADS TO HEALTHY PEOPLE

That's why the missions of both UW Health and the Department of Anesthesiology include a commitment to advancing health

through social responsibility. In the past decade our department has enhanced the social, environmental and economic sustainability of our practice through waste reduction and education. Dr. Karin Zuegge leads the efforts as the inaugural UWH Medical Director of Sustainability. In 2023, UW Health received the highly competitive Emerald Award from Practice Greenhealth.

CARBON EMISSIONS REDUCTION

In 2012, we began education initiatives with Grand Rounds lectures, new employee orientation, signage and a resident sustainability educator. Over time we have seen steady reduction in our anesthetic gas waste and a concurrent savings of more than \$30,000 per month compared with a 2011 baseline.

Back to front, Dr. Karin Zuegge, MD, UW Health Medical Director of Sustainability, Dr. Bridget Muldowney, MD, Dr. Eva Lu-Boettcher, MD.

Vaporizer labels and signage along with emissions education has led to emissions reduction and cost savings.

We also achieved a 73% reduction in our carbon dioxide emissions, the equivalent of eliminating the emissions of more than 2,400 cars per year between 2011 and 2018.

American Family Children's Hospital has become a national leader in eliminating the use of nitrous oxide at induction of anesthesia. With ongoing education and quality projects involving use of low flow and further reduction of nitrous oxide, we strive to lower our emissions even further.

SOLID WASTE REDUCTION

To reduce upstream waste, we favor reusable supplies wherever possible, and providers are educated to avoid wasteful set ups with excessive supply opening. We have also reduced our landfill waste stream from the ORs by 23%, diverting more than 9,000 cubic yards of waste from our landfill in one year.

In just two years, UW Health and the Department of Anesthesiology collected and recycled 352 pounds of medication vial caps with an approximate volume of 20 cubic feet (about a freezer-chest full). These caps get a second life as stacking bins, stools and even toys and art supplies. Several vial cap art installations can be seen throughout UW Health locations.

Global Health Programs and Committee

Members of the UW School of Medicine and Public Health Department of Anesthesiology have had a long-standing commitment to caring for the underserved, both at home and abroad. The department sponsors trips to low and middle-income countries, providing service, education, and training. These trips often include faculty, fellows, residents, and students. Historically, these endeavors were individually initiated and the funding for this important work was ad hoc. Under Dr McQueen's leadership, a new global fund was established to support education and training, service, and research overseas. The Global Academic Anesthesia Consortium (GAAC) a collaborative network of academic anesthesia departments in the US is committed to building

anesthesia infrastructure through service, education, and research programs in low and middle-income countries (LMICs). The GAAC was launched in January 2023 in collaboration with the University of Zambia, in Lusaka, Zambia. This partnership will send teams around the year, providing anesthesia education and training, quality initiatives, and research education. This sustained effort hopes to progressively improve access to safe anesthesia and surgery and is committed to increasing the number and expertise of trainees in Sub-Saharan Africa. In future years, the GAAC may expand to provide sustained service and education in additional low and middle-income countries.

Photos from recent global trips.

Experience Madison!

VisitMadison.com describes Madison as a good eats kind of a city. A get on your feet kind of city. A city where history and future meet. We've got a small-town feel. And big-city amenities. Lake life, campus cool, and endless things to do. Discover more of Madison!
